A cloud solution for the demands of modern gastronomy

Developed for modern gastronomy

- Hardware-independent and optimised for mobile devices
- Internationalised, several languages available as standard
- Extensions by external developers possible at any time, marketplace for the purchase of additional functionalities
- Powerful reporting and monitoring functions

Highly secure and tax compliant

- Protection of all business and guest data
- 100% in accordance with local laws
- Provision of data for tax offices with one click

Flexible seating planning

- Flexible room and table plans for different formatting depending on the daily usage concept (e.g. standard or wedding)
- Editing of room and table plans directly at the checkout
- Easy moving or merging of tables

Easy order taking

- Processing of all types of orders via the same cash register (in-house, to-go), recording of order instructions directly at the table
- Automatic mapping of the respective tax rates
- For fast-food restaurants: placing of orders by customers directly at the self-order terminal

Structured menu management

- Starters, main courses and desserts can be linked directly at the checkout
- Ingredients can be created directly for each dish to avoid mix-ups during preparation in the kitchen

Clear in-house communication

- Print control on an item basis for automatic assignment of orders to the correct service point (e.g. kitchen or counter)
- Direct recording of additional requests or changes and immediate forwarding to kitchen or counter
- Cost-effective additional ordering assistants for temporary staff and runners (without cashier function)
- Extended functionality through optional kitchen displays, digital signage, touchscreens with tip function

Fast reservations and customer loyalty programmes

- Central planning of reservations in a calendar that can be accessed by all employees
- Storage of important customer information directly in the calendar (e.g. VIP identification)
- Implementation of customer cards

Implementation of all payment types

- Cash payments and cash management
- Credit voucher creation and acceptance
- debit cards and credit cards
- Mobile Payment
- PIN on Glass

Individual document creation

- Output of tax-compliant hospitality receipts
- Individual order and payment splitting for groups or persons
- If desired, output of interim receipts
- Optional automatic tip entry with rounded-up total amount
- Digital receipt via QR code
